**Facelight: A second opinion at your fingertips!**

The Award winning innovative caries detection unit

Caries seen differently!

The Facelight probe offers more certainty in caries detection during excavation, providing optimum support for efficient, minimally invasive working. While conventional methods only offer indirect information on the extent of caries in infected dentine, Facelight gives dentists the ability to assess the treatment site at a glance enabling direct visual detection of caries in opened cavities. Facelight offers:

- Visual identification of the scope of caries infection using Fluorescence Aided Caries Excavation (FACE) technology
- Prevention of over excavation of dentine
- Reduction in the risk of residual caries beneath fillings and crowns
- Increased comfort by minimising invasive probing for pain-sensitive patients

Facelight: Safe - Efficient - Minimally Invasive Diagnostics
assistina 3X3
Clean Inside, Clean Outside

3 x handpieces, 3 x steps for ideal handpiece care

The Assistina 3X3 is the most thorough handpiece cleaning system currently available, providing an extensive cleaning process, combining:

• Thorough cleaning of internal spray channels and transmission parts
• External handpiece cleaning
• Precise, consistent automatic lubrication of all internal components

The new Assistina 3X3 is validated to remove commonly encountered microbes in the dental surgery, with a cleaning efficacy of over 99%, offering a real alternative to putting handpieces in a thermo washer disinfector and preparing your handpieces for sterilization.

Special Launch Price
£2,649  RRP £3,333
